

SYSTEM AND METHOD FOR EFFECTIVELY PROVIDING
USER INFORMATION FROM A USER DEVICE

5

ABSTRACT OF THE DISCLOSURE

A system and method for effectively providing user information from a user device includes an event server that provides restricted access to various types of event content information and services related to a particular event

- 10 or user community. A wireless portable user device may provide an access code to the event server at a particular event location through a wireless base station that is coupled to a local area network. A system user may thereby utilize the user device to access the event server for downloading appropriate event content information and related community services. The user device
15 may provide one or more different types of profiles and other user feedback to the event server to thereby enable the event server to effectively associate the user device with appropriate event content or other types of related community services.
